

INTRODUCING THE INDUSTRY DISRUPTING MOBILE COMMAND CENTER

MINI 2.0

With the Mini 2.0 it is now possible to bring powerful 4G LTE & 5G connectivity on the go, in the harshest rugged environments.

EXTERIOR

COMPACT

Similar to the size of a lunch box, this MCC is extremely portable by measuring in at 10.9" x 9.9" x 5", and weighing less than 7 LBS.

RUGGED CASE

The custom aluminum sub chassis ties in to both sides of the case increasing the rigidity and strength of the box to survive the most extreme environments.

PORT ACCESS

Weather-resilient exterior port access to USB data, USB charging, WAN/LAN, and power button.

SECURITY

Ability to lock the case to eliminate tampering.

INTERIOR

ANTENNA

The built-in high-gain antenna and two Wi-Fi antennas provide an increased signal in the most remote of locations.

ROUTER

The modular ability of the unit design allows for versatile selection of Cradlepoint routers to best suit your needs and adapt as you grow (IBR600, IBR900 and R1900).

WINDOW VIEW

The molded cover of the base includes a clear window to access router information and quick start instructions.

HEAT VENTS

The heat management vents allow for any heat to escape, but through a well thought design, external components cannot enter the vents and harm the protected components.

BATTERY LIFE INDICATOR

Molded battery indicator lights on the cover plate allow you to know what percentage battery life you have left at the touch of a button.

BATTERY

The new 10Ah battery provides increased battery run time with an intelligent power board. The full custom aluminum sub chassis is form fit to the case that houses and protects the lithium pack battery and control board.
